HEALTH LANGUAGE, INC. PARTNERS WITH ACTIVEHEALTH MANAGEMENT TO MANAGE CLINICAL VOCABULARY CONTENT

Aurora, Colo. – Dec. 3, 2007 – Health Language, Inc.® (HLI), the world's leading supplier of language engine technology for medical vocabulary, today announced that ActiveHealth Management (ActiveHealth®), a clinically based, technology-driven health management services company, has selected HLI to deliver administrative and clinical content management tools.

“As we expand the number of code sets and cross-walks that we need to support, we must enhance our terminology services architecture. Just managing the updates to ICD-9CM, CPT-4, HCPCS, LOINC and FDB-ETC consumed critical resources,” stated Frank C. Norman Jr., executive vice president and chief information officer of ActiveHealth Management. “By leveraging HLI’s Language Engine® tool and personnel, we are eliminating a lot of this work, enabling us to add support for additional vocabularies as we continue to grow our clinical health information exchange.”

The HLI Language Engine provides a tool for payers, healthcare organizations, IT vendors and government agencies to effectively localize, update and disseminate over 70 controlled, licensed healthcare terminologies, mappings and other terminology-related content issued by a growing number of standards bodies. Standardized medical terminology has been identified as a critical element to ensuring advanced interoperability among various healthcare IT applications; thus, contributing to improved patient safety, superior clinician decision-making capabilities and rapid reimbursement.

“To maintain efficient and effective operations, ActiveHealth Management requires the most up-to-date administrative codes and clinical content as the company actively pursues new markets or expands the scope of services offered to its customers,” said George Schwend, CEO and president of Health Language, Inc. “Health Language meets ActiveHealth Management’s business requirements today and is positioned to handle its future needs with our expertise in managing controlled vocabularies and related content along with our advanced mapping and searching tools that are being integrated into its clinical decision-support-powered health management solutions.”

Health Language provides a software and services solution that supports recurring updates and management of codes sets and medical terminology on a scheduled basis. Additionally, Health Language’s technology supplies functionality to deliver consumer terminology content and maps between code sets to support advanced initiatives in care management, CMS medical payment policy edits, P4P, and normalization of disparate databases. This mapping capability delivers the foundation for future migration from ICD-9 CM to ICD-10 CM. Furthermore, the extensive HLI library of APIs allows clients such as ActiveHealth Management to integrate HLI Language Engine capabilities into corporate applications using .NET, JAVA, EJB and Microsoft client architectures.

About ActiveHealth Management

ActiveHealth Management is a clinically based, technology-driven health management services company. Health plans, employers and government payers rely on ActiveHealth's CareEngine[®] System Clinical Decision Support, Disease Management, Health Management and Data Analytics solutions to improve care for those most in need, prevent medical errors, reduce hospitalizations and lower medical costs. Over 15.4 million people nationwide benefit from programs powered by ActiveHealth's patented CareEngine[®] System. ActiveHealth is an independent subsidiary of Aetna (NYSE: AET). (HCIT) applications. HLI's Language Engine® (LE®) allows centralized access to medical terminology standards and generates mappings to create a common pool of standardized codes and concepts that enhance patient safety, facilitate clinical outcomes analysis and accelerate reimbursement. It also provides standards for modeling, storing, updating and distributing information consistently for interoperability between hospitals, regions and countries. LE solutions seamlessly integrate with EMRs for clients such as Cerner, McKesson, Misys, Partners Healthcare and Great Britain's National Health Service.
