Health Language® Technology Improving Clinical Decision Support Presented at SNOMED User's Group

*Dr. Levy to Address how 3rd Party Electronic Medical Record Systems Using Language Engine™
Technology with SNOMED Provide Dramatic Improvement in Functions and Decision Support*

Aurora, Colorado – September 10, 2003 – Health Language, Inc., the world's leading supplier of healthcare terminology tools, today announced that Brian Levy, M.D., Chief Medical Officer and Vice President, will address the SNOMED user's group relating to the use and benefits of health vocabularies software technology.

The combination of an electronic medical record and a language engine facilitates structured data entry at the point of care as well as decision support. New care applications allow clinicians to perform point of care terming, or structured data entry using SNOMED CT within the Health Language product, a language engine. Clinicians, using various searching and entry techniques, are able to readily search SNOMED CT for clinical documentation through their electronic medical record system calling the language engine. Many decision support rules may also be implemented based on a controlled medical terminology. For example, an application can call the language engine to perform classification checking, such as does this patient have a type of Diabetes, and if so, trigger certain specified rules. An HLI customer example of a shipping third-party clinical care application will be provided.

Dr. Levy serves as Chief Medical Officer and Vice President for Health Language, Inc. He is responsible for and oversees the clinical and content development team managing the code-set and vocabulary components to Health Language, Inc.'s language engine technology, called LE. Dr. Levy is also a board-certified, practicing internist.

More information about this up-coming SNOMED user's group is available at www.snomed.com.

About Health Language Inc.

Health Language, Inc. is a software infrastructure company that services the healthcare industry worldwide. LE, the company's language engine product, creates a common medical index across disparate standards and healthcare information systems, allowing for comprehensive integrated and intelligent management of all health data.
