Health Language's Medical Director of eHealth to Address Improving HandHeld Use By Clinicians at Point-of-Care at T.E.P.R.

Language Engine Technology Improves Handheld Acceptance and Functionality

Aurora, Colorado – April 17, 2001 – Health Language, Inc., the world's leading supplier of healthcare terminology tools, today announced that Brian Levy, M.D., Medical Director of eHealth and Pharmacy, accepted the invitation to present at the Towards an Electronic Patient Record (TEPR) 2001 Conference in Boston, MA. Dr Levy will be presenting on how to dramatically improve physician acceptance of handheld technology. The presentation will include a review of example use cases and a live demonstration.

In his planned presentation, "Using a Controlled Medical Terminology (CMT) in a Hand-Held Device at the Point of Care", Dr Levy will review how medical language technology optimizes handheld applications for use at the point of care. He will demonstrate how handheld devices may deliver medically relevant and appropriate medical language to the clinician during rounds and other patient interactions. He will also address how the widespread use of normal handheld and wireless devices further justifies use of medical language technology at the point-of-care.

Dr. Levy serves as the Medical Director of eHealth and Pharmacy for Health Language, Inc. He is responsible for development of the pharmacy component to Health Language, Inc.'s language engine technology, called Cyber+LE, as well as Health Language Internet strategies and training. Dr. Levy is a board-certified internist and maintains an active part-time practice in both outpatient and inpatient care in Denver, Colorado.

The 17th Annual TEPR Conference is scheduled May 8th through May 13th, 2001, in Boston, Massachusetts, at the Hynes Convention Center. Information about TEPR or the 2001 conference agenda is available at www.tepr.com.

About Health Language Inc.
