## Adiuri Systems Partners With Health Language Technology For U.K. Government Initiative

*Language Engine Software LE™ Chosen To Provide Terminology Services For National Project*

**AURORA, Colorado – May 29, 2003** – Following the award of the contract to develop a Common Information Environment Demonstrator for Health Information to Adiuri Systems, Adiuri has turned to Health Language, Inc., language engine technology LE™ to provide key terminology services.

“Our selection of Health Language’s language engine reflects the goals of the NHS’ IT initiative,” said Mark Corderoy, CEO of Adiuri Systems Ltd. “HLi provides superior terminology management tools and terminology-related support for applications and services.”

The Adiuri Systems’ demonstrator will be one of the first systems in the UK to use the recently launched clinical classification system, SNOMED CT. The demonstrator will go live in June, demonstrating the rapid project deployment that is possible using the Adiuri’s Waypoint™ product suite.

"Health Language is pleased to announce our new partnership with Adiuri Systems, an innovative company specializing in the field of Knowledge Management tools in the United Kingdom," said George T. Schwend, President and CEO of Health Language, Inc. "As an initial project, we are excited to be participating with Adiuri Systems on the JISC / NHS strategic Demonstrator initiative."

Health Language’s LE Language Engine™ is a revolutionary technology that enables physicians, nurses, insurance companies, payors and others to interact and share medical information at a deep relational level despite varying terminologies. LE™, based on a patent-pending knowledge management model, is currently the only software available to the healthcare industry that can accurately relate complex medical terminology from disparate databases of controlled medical vocabularies.

The Common Information Environment Demonstrator for Health Information is backed by JISC, The British Library, The Core e-science Programme, National Electronic Library for Health (NeLH), Resource and UKOLN.

### ***About Adiuri Systems Ltd***

Adiuri Systems Ltd was formed in 2002 to commercially develop the research work carried out by the Universities of Bath and Bristol as part of the IDEA (Information for Design Engineering in Aerospace) project. Adiuri has been set up to bring the benefits of the Adaptive Concept Matching system to both the engineering and aerospace sectors and develop new applications for the wider business community, such as the National Health Service.
