

## **Leading U.K. Application Vendor iSOFT PLC Selects Health Language Technology**

*Relationship Represents Major Expansion into U.K. market for Health Language, Inc.*

**AURORA, Colorado – January 14, 2002** – iSOFT PLC has selected Health Language's Cyber+LE for its clinical terminology module and services. ISOFT is one of the world's leading suppliers of application systems for hospitals and healthcare organizations in both the public and private sectors. Health Language, Inc., is the world's leading supplier of medical vocabulary and concept-based software server technology.

Health Language's Cyber+LE™ Language Engine™ is a revolutionary technology that enables physicians, nurses, insurance companies, payors and others to interact and share medical information at a deep relational level despite varying terminologies. Cyber+LE, based on a patent-pending knowledge management model, is currently the only software available to the healthcare industry that can accurately relate complex medical terminology from disparate databases of controlled medical vocabularies.

One significant advantage of the HLi middleware is the reduction in time to market for the development of the clinical terminology module, and in the flexibility which iSOFT can expose through its products in the use, extension, mapping and customization of the SNOMED CT content to suit particular clinical and organizational settings. According to Steve Graham, iSOFT's Chief Operating Officer, "This strategic partnership is yet another example of iSOFT's commitment to innovation in healthcare. The developments we are planning based on the HLi middleware will enhance the value proposition of our existing and future product range considerably, offering specific benefits to healthcare professionals and their patients."

"We are delighted to participate in and contribute to iSOFT's continuing success," said George T. Schwend, President and CEO of Health Language, Inc. "This is the true benefit of LE: enabling faster application development in creating applications that will understand clinicians better by enabling the application to understand underlying medical concepts and codes that clinicians use."

### ***About Health Language Inc.***
